1 Wrapping Latex Environments

The following is a demonstration of a custom \LaTeX command with a couple of parameters.

This is verbatim, alltt, text.

Setting $\underbrace{\text{escape}}_{\text{to escaping...}}$ to $\underbrace{\text{False}}_{\text{ensures}}$ ensures that text in the environment is not subject $\underbrace{\text{to escaping...}}$

Setting content_separator ensures that line endings are broken in the latex just as they are in the input text. alltt supports math: $x^2=10$

This is back to normal text...
